

# Habilitation to Supervise Research

Presented by:  
**Firstname LASTNAME**

## A PLACEHOLDER TITLE FOR A PLACEHOLDER MANUSCRIPT

Defended publicly on **November 12<sup>th</sup>, 2026** before the jury composed of:

*Reviewers*

**Firstname REVIEWERONE**, Senior Researcher, HDR  
Placeholder Laboratory, Placeholder University

**Firstname REVIEWERTWO**, Professor, HDR  
Placeholder Institute

**Firstname REVIEWERTHREE**, Senior Researcher  
Placeholder Laboratory

*Examiners*

**Firstname EXAMINERONE**, Researcher, HDR  
Placeholder Institute

**Firstname EXAMINERTWO**, Professor, HDR  
Placeholder University

# FOREWORD

## TL; DR

This chapter is an unnumbered one, obtained with `\chapter*[label]{Title}`. Use it for a foreword, for the [Acknowledgements](#) that follow, or for anything that should not carry a chapter number. Such a chapter still takes a label, and is referred to exactly like a numbered one: `\nameref{foreword}` gives [Foreword](#).

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

## How to Read This Document

This document is meant to be read in its PDF version, using a viewer able to display tooltips (*e.g.*, Acrobat, Evince, Overleaf). Hovering an acronym or a citation then shows a short description, without having to jump to the end of the document.

- **Acronyms** — Every acronym is defined once in `acronyms.tex`, and recalled in the list of [Acronyms](#). In the text, `\acro{ai}` gives AI, `\acrofull{ai}` gives Artificial Intelligence (AI), and `\acroname{ai}` gives Artificial Intelligence.
- **References** — Citations to my own work carry a code indicating the type of publication, *e.g.*, `[J3]` for a **J**ournal or `[C5]` for a **C**onference. External references appear like `[IPSUM et al., 1998 Chapter II, and \nameref{example_figure} gives Figure 2. Unnumbered chapters are recalled by their title rather than by a number, which also applies to the two chapters closing the document: \nameref{bibliography} gives Bibliography, and \nameref{glossary} gives Acronyms.`

The template used for this document is available at [\[GitHub](#)

## ACKNOWLEDGEMENTS

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

Unlike the [Foreword](#), this chapter has no section at all, which is perfectly fine: an unnumbered chapter behaves as a regular one, minus the number and the mini table of contents.

---

# CHAPTER I

## INTRODUCTION

The optional fourth argument of `\chapter` is a short text displayed on the chapter page, above the mini table of contents.

Use it to announce what the chapter contains, and to point to its sections, *e.g.*, [Section I.1](#) and [Section I.3](#).

---

|            |                      |       |          |

---

## I.1 Context

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua [IPSUM *et al.*, 1998 ]. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat [TEMPOR *et al.*, 2009 .

Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

### Challenge 1 Stating the problem in one sentence

Boxes are created with `\begin{boxenv}[label]{Type}[Title]`. The type is free: a counter is created automatically for each distinct type, so this one is [Challenge 1](#). Boxes are also breakable, so a long one will span several pages without any special care.

## I.2 Contributions

My contributions to this placeholder topic are summarized below, and detailed in [Chapter II](#).

- A placeholder method for placeholder data, published in [J<sub>3</sub>].
- A placeholder analysis of placeholder models, published in [C<sub>5</sub>].
- A placeholder application to a placeholder use case, published in [B<sub>2</sub>].

## I.3 Outline

[Chapter II](#) summarizes my past activities, and [Chapter III](#) presents the directions I intend to follow. Additional material is provided in [Appendix A](#), and the document closes on the [Bibliography](#) and the list of [Acronyms](#). These two chapters are unnumbered, just like the [Foreword](#) and the [Acknowledgements](#) opening the document, and are therefore recalled by their title rather than by a number.

---

## CHAPTER II

# OVERVIEW OF PAST ACTIVITIES

This chapter is the showcase one: it demonstrates the figures, tables, equations, boxes and cross-references provided by the template.

All the text is placeholder text, so do not look for any meaning in it. Replace it with a summary of your own activities.

---

## II.1 A First Research Topic

### II.1.1 Context

Lorem ipsum dolor sit amet, consectetur adipiscing elit [IPSUM *et al.*, 1998 

#### Definition 1 Placeholder object

A *placeholder object* is any object that carries no meaning, and only exists to occupy the space where a real one will eventually be written. Note that the counter of this box is independent from the one of [Challenge 1](#), since the types differ.

Placeholder objects satisfy the property stated in [Theorem 1](#), whose proof is immediate.

#### Theorem 1 Conservation of placeholders

Let  $\mathcal{P}$  be a set of placeholder objects, and  $f$  a placeholder map. Then  $f(\mathcal{P})$  is a set of placeholder objects.

#### Proof of Theorem 1

By definition, a placeholder object carries no meaning. Applying a placeholder map to a meaningless object cannot create meaning, hence the result.  $\square$

### II.1.2 Method

The overall pipeline is sketched in [Figure 1](#): a placeholder object, as introduced in [Definition 1](#), is fed to a placeholder model that produces a placeholder output. The placeholder loss we minimize is given in [Equation 1](#), where  $\mathbf{x}$  denotes an input,  $\mathbf{y}$  its target, and  $\theta$  the parameters of the model.

$$\mathcal{L}(\theta) = \frac{1}{N} \sum_{i=1}^N \|f_{\theta}(\mathbf{x}_i) - \mathbf{y}_i\|_2^2 + \lambda \|\theta\|_2^2 \quad (1)$$

Note that equations, figures and tables are numbered continuously across the whole document, and not per chapter. This is on purpose: it makes cross-references such as [Equation 1](#) unambiguous.

### II.1.3 Results

Results are reported in [Figure 2](#), and summarized in [Table 1](#). As expected, the placeholder model in [Figure 2 \(b\)](#) outperforms the placeholder baseline, which is exactly what a placeholder result is supposed to do.

**Figure 1** The pipeline used throughout this placeholder chapter. A figure is declared with `\begin{figure}[label]{caption}`, and takes no placement specifier: the caption is the second, mandatory argument.

(a) A raster image, included with the usual `\includegraphics`.

(b) A vector figure, generated by a script and included with `\input`.

**Figure 2** A figure made of several subfigures. Subfigures take a label, a width, and a caption, and can be referred to individually, as in (a), or as a whole through [Figure 2](#).

| Dataset       | Baseline        | Placeholder model                 |
|---------------|-----------------|-----------------------------------|
| Placeholder-A | $0.70 \pm 0.02$ | <b><math>0.87 \pm 0.01</math></b> |
| Placeholder-B | $0.61 \pm 0.03$ | <b><math>0.79 \pm 0.02</math></b> |
| Placeholder-C | $0.55 \pm 0.04$ | <b><math>0.68 \pm 0.03</math></b> |

**Table 1** Placeholder results, on placeholder datasets. Tables follow the same convention as figures: `\begin{table}[label]{caption}`.

## II.2 Collaborations

Beyond Section II.1, I contributed to a few placeholder collaborations, listed below. CNNs were involved in most of them, which is a convenient excuse to demonstrate a tooltip-only acronym: `cnn_plural` has an empty `long` field, so it never appears in the list of [Acronyms](#), but its tooltip still works.

 [\[B<sub>2</sub>\]](#) Firstname LASTNAME, Second COAUTHOR (2019). **“Consectetur Adipiscing Elit: A Placeholder Book Chapter”**. *Handbook of Placeholder Methods* (pp. 101–128), Placeholder Press

A starred box, `boxenv*`, is not numbered. This makes it convenient to summarize a publication: the title of the box is the citation, and its subtitle the full reference. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt.

 [\[W<sub>6</sub>\]](#) Fourth STUDENT, Firstname LASTNAME (2023). **“Duis Autem Irure: Preliminary Placeholder Results”**. *Workshop on Placeholder Directions*

Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur.

Online resources can be cited the same way, *e.g.*, [\[PLACEHOLDER !\[\]\(e1d6102fe77919492c04879c8450f1f5\_img.jpg\)Bibliography](#).

---

## CHAPTER III

# FUTURE WORK & DIRECTIONS

A short chapter, to show that a chapter does not have to be long.

It presents the directions I intend to follow after the work summarized in [Chapter II](#).

---

|       |            |       |    |
|-------|------------|-------|----|
| III.1 | Short Term | ..... | 14 |
| III.2 | Long Term  | ..... | 14 |

---

### III.1 Short Term

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. This direction directly extends [P<sub>7</sub>], and relies on the placeholder loss of Equation 1.

#### Challenge 2 Making placeholders scale

The main obstacle is the cost of placeholder training, which grows with the number of placeholder objects. Note that this box continues the counter started by Challenge 1, since both share the same type.

### III.2 Long Term

Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. In the long run, I would like to address Challenge 2 by combining the results of Section II.1.3 with the SOTA approaches of [AMET *et al.*, 2017 

- A first placeholder direction, on placeholder data.
- A second placeholder direction, on placeholder models.
- A third placeholder direction, on placeholder applications.

---

# APPENDIX A

## CURRICULUM VITÆ

An appendix behaves exactly like a chapter, except that it is numbered as an appendix and appears under a dedicated entry in the table of contents.

This one shows the two-column layout used throughout the template for tabular material.

---
